

Scenario:

Integrate the AI Agent with Jira by adding a "Connect Jira" feature that allows users to establish a connection using their Jira Base URL, Email ID, and Jira API Token. Once the connection is successfully established, retrieve and populate the available Jira user stories within the application. Ensure the implementation follows the existing project architecture, UI design, and coding standards while maintaining compatibility with the current functionality.

After clicking on 'Connect Jira' by providing required details, connection established successfully.

The screenshot shows a web application interface with a browser address bar at the top displaying 'localhost:5173'. The main content area is divided into two panels. The left panel, titled 'Connect Jira', contains a form with the following fields: 'Base URL' (filled with 'https://reka127.atlassian.net'), 'Email ID' (filled with 'reka127@gmail.com'), and 'Jira API Key' (filled with a series of dots). A green status bar below the form indicates 'Connected to Jira successfully'. Below this, there is a green button labeled 'Connect Jira'. At the bottom of the left panel, under the heading 'Available Jira Stories', there is a text prompt 'Select a story to populate the form.' and a 'Refresh' button. A list of stories is displayed below, with the first entry being 'SCRUM-2 Task 2 Story'. The right panel features a large green box with a test tube icon and the heading 'Your test cases will appear here'. Below this, a message states: 'Fill in the story details on the left and hit Generate. We'll craft positive, negative, edge, and more test cases for you.' At the bottom of this panel, there are four buttons labeled 'Positive', 'Negative', 'Edge', and 'Authorization'.

After selecting the US, details from jira US loaded successfully.
